

Soumya Banerjee

neel.soumya@gmail.com | sites.google.com/site/neelsoumya

Education

- PhD in Computer Science** 2013
University of New Mexico, USA
- Bachelor of Engineering (Computer Science), with Distinction** 2003
Nagpur University, India

Recent Employment

Senior Lecturer *University of York, UK, 2026 – till date*

Assistant Research Professor *University of Cambridge, UK, 2025 – 2026*

Senior Research Fellow and Affiliated Lecturer *University of Cambridge, UK, 2022 – 2025*
I develop explainable AI techniques and apply them to various domains like healthcare. I also teach courses on AI and supervise student projects.

Postdoctoral Researcher *University of Cambridge, UK, 2019 – 2022*
I used machine learning techniques and data science on electronic healthcare record data to help stratify patients and predict mortality. This work was published in *Nature Partner Journal Schizophrenia*.

Postdoctoral Researcher *University of Oxford, UK, 2016 – 2018*
This project involved modeling negative selection in the immune system, using multi-scale models to simulate how immune system cells are trained in the thymus. The work resulted in a manuscript published in the *Journal of the Royal Society Interface*.

Researcher *Commonwealth Scientific and Industrial Research Organisation, Australia, 2015 – 2016*
This project involved modeling socio-economic systems by combining open data with machine learning techniques, using a publicly available UCI Machine Learning Repository dataset on crime in cities. Statistical, machine learning, and non-linear dynamical models were used to infer novel patterns in urban crime. This resulted in a manuscript published in *Palgrave Communications*.

Post-doctoral Research Fellow *Harvard University, Harvard Medical School and Broad Institute of Harvard and MIT, USA, 2014 – 2015*
This work involved investigating the interaction between the immune system and the human microbiome, implicated in disorders such as inflammatory bowel disease. Computational techniques were used to predict compounds likely to be secreted by gut microbes based on their genome; compounds computationally predicted to be differentially abundant in healthy vs. disease subjects across multiple cohorts are likely to play an important role in inflammatory bowel disease. This project was implemented in Python, shell scripts, and MATLAB.

Post-doctoral Research Fellow *Max Planck Institute for Molecular Physiology, Germany, 2013 – 2014*
The Rho GTPase family of proteins influence cell motility and cytoskeleton dynamics across all eukaryotes. This project investigated the interaction between three different Rho GTPase proteins and how this shapes cell motility, using non-linear differential equation models. Hierarchical Bayesian models were used to combine data from different experiments for more accurate parameter estimates

despite noisy experimental data. All code was implemented in MATLAB and shell scripts and run on high-performance computing platforms; automated image analysis of cell images from microscopes was also implemented using tools like CellProfiler and ImageJ. Training was also received in wet-lab skills including plating and splitting cells, staining with primary and secondary antibodies, transfection, and microscopy. The work resulted in publications in *Angewandte Chemie* (Impact Factor = 13.1) and the *Journal of Cell Biology* (Impact Factor = 9.7); one further manuscript was in preparation.

Research Intern *Los Alamos National Laboratories, Theoretical Biology and Biophysics Group, USA, 2009 – 2012*

This project (PhD thesis) involved modeling emerging pathogens (such as West Nile virus and avian influenza) with sparse experimental data and considerable parameter uncertainty. The complex interaction between virus, host cells, and the host immune system was simulated using non-linear differential equations, building mathematical models able to predict biologically relevant quantities such as the basic reproductive number and infectious virion burst size with high precision despite noisy data and input uncertainty. Novel contributions included: (1) a combination of knockout experimental data and mathematical models, and (2) hierarchical Bayesian models incorporating hierarchy in data and biologically motivated priors to generate more precise estimates than otherwise possible from sparse experimental data. The work resulted in a manuscript accepted in the *Journal of the Royal Society Interface* and was presented at three international venues. The MATLAB programs developed to solve these statistical problems were made accessible via easy-to-use graphical user interfaces and released as open source; based on download counts, this work has been ranked within the Top 250 worldwide among MATLAB open-source code contributors.

Research Assistant *University of New Mexico, Department of Computer Science, USA, 2007 – 2013*

This project involved work in computational immunology: using techniques from computer science to solve problems in immunology, and taking inspiration from the immune system to solve problems in computer science. Specifically, this work suggested how the physical architecture of the immune system might lead to nearly scale-invariant immune search and response, and proposed architectures for human-engineered distributed systems (such as peer-to-peer networks and mobile ad-hoc networks) with faster search and response characteristics, inspired by the immune system. The work resulted in one journal publication (*Swarm Intelligence*) and four peer-reviewed conference publications.

Senior Software Engineer and Technical Lead *Cognizant Technology Solutions Ltd., India, 2004 – 2007*

This work was in the financial services sector with various Fortune 500 clients, involving interacting with clients, defining project requirements, implementing solutions according to requirements, coordinating a team of developers, and rigorous testing. Work was on the UNIX platform using C, C++, shell scripts, and Sybase, as well as web-based application development with ASP.NET and database development with MS SQL Server.

Software Engineer *Automation Engineers, India, 2003 – 2004*

Teaching Experience

Fellow of the Higher Education Academy, Advance HE. Teaches machine learning at the University of Cambridge Department of Computer Science and Bioinformatics Training Centre, and has taught students from Uganda through the University of Cambridge Africa programme. Also taught data science at the University of Oxford Complex Networks Summer School.

Teaching experience spans data science, machine learning, advanced machine learning topics, repro-

ducibility techniques in machine learning, and data visualization, over the last 10 years in higher education institutions.

Example courses developed and taught:

- Unsupervised machine learning course: <https://cambiotraining.github.io/ml-unsupervised/>
- *Unconventional Approaches to Artificial Intelligence* (special topics course developed): https://github.com/neelsoumya/special_topics_unconventional_AI
- Reproducible research in R: https://github.com/neelsoumya/teaching_reproducible_science_R
- Data science and visualization: https://github.com/neelsoumya/visualization_lecture
- Full teaching materials (machine learning, complex systems, programming basics): <https://sites.google.com/site/neelsoumya/teaching>

Other teaching activities:

1. Cambridge-Africa Programme, University of Cambridge, 2020 (lectures)
2. Oxford Summer School in Economic Networks, Mathematical Institute, University of Oxford, 2017 (lectures and tutorials)
3. Trained in teaching at the University of Oxford Doctoral Training Centre, 2017
4. Lectured at the Complex Adaptive Systems course, Department of Computer Science, University of New Mexico, USA, 2009–2012 (lectures and tutorials on complex systems and computer science)
5. Co-designed teaching resources with educators to make teaching broadly accessible (samples available at <https://www.simiode.org/resources/3206> and <https://osf.io/25gnz/>)

Publications

Note: in Computer Science, conferences are peer-reviewed and function as a primary publication venue.

Book Chapters

1. R. Garcia-Flores, S. Banerjee, and G. Mathews. Using optimisation and machine learning to validate the value of infrastructure investments. In *Infrastructure Investments: Politics, Barriers and Economic Consequences*. 2016.

Honours and Awards

1. 2010 Student Award for Innovation in Informatics (awarded to a University of New Mexico graduate or undergraduate student for the best paper describing innovation or research in biomedical informatics)
2. Distinction and 5th rank in Nagpur University (out of 2000 examinees) in the Bachelor of Engineering programme
3. Best poster award at the 1st International Online Conference of the Journal *Philosophies*, 2025

Grants

1. Grant from OpenAI Researcher Access Program for API credits (April 2024): 3000 US dollars
2. Co-investigator on two pilot grants from the AI@CAM initiative at the University of Cambridge (February 2024): 150,000 pounds
3. Grants under review: Co-investigator on MRC New Investigator Grant (May 2025)

Invited Talks

1. Responsible AI and involving patients in AI model building, Nokia Bell Labs, Cambridge, February 2025
2. Talk at UK-India Cooperation Towards a Fair AI Horizon, December 2024
3. Keynote presentation, Physics of Self-Organization in Complex Systems Satellite meeting, Conference on Complex Systems, Exeter, UK, September 2024
4. Computational Immunology, Microsoft Research, Cambridge, UK, March 2017
5. Modeling Emerging Pathogens under Uncertainty and Sparse Experimental Data, Harvard Medical School, Boston, USA, September 2014
6. Modeling Emerging Pathogens under Uncertainty and Sparse Experimental Data, IBM Research, India, August 2014
7. Computational Screens for Novel Gut Microbial Bioactive Compounds, Novartis Institutes for Biomedical Research, Boston, USA, July 2014
8. Scaling in the Immune System, Commonwealth Scientific and Industrial Research Organisation, Australia, March 2013
9. A Mathematical Model of Body Size Effects on Pathogen Replication and Immune System Response, International Network of Theoretical Immunology, Los Alamos National Laboratories, USA, August 2010
10. A Hybrid Agent Based and Differential Equation Model of Body Size Effects on Pathogen Replication and Immune System Response, School of Health Sciences, University of New Mexico, USA, April 2010

Supervisions

Supervised 17 MPhil (postgraduate) students and 3 summer interns. Co-supervised 1 PhD student.

Academic Service

1. Program committee member of ICLR Workshop HCAIR 2026
2. Served on recruitment panels for recruiting PhD and MPhil/MSc students
3. Program committee member of International Conference on Artificial Immune Systems
4. Program committee member for ECML-PKDD Workshop on Hybrid Human-Machine Learning and Decision Making, 2023
5. Review Editor for *Frontiers in Virology*
6. Reviewer for *IEEE Transactions on Systems, Man, and Cybernetics* and *IEEE Transactions on Emerging Topics in Computational Intelligence*, AAAI workshop NeurMAD
7. Reviewer for SIMIODE (Systemic Initiative for Modeling Investigations and Opportunities with Differential Equations)

Computer Languages

1. Programming — Python, R, MATLAB, UNIX shell scripting, C, C++, Perl, ASP.NET, Haskell
2. Databases — MS SQL Server, Sybase
3. Image analysis and automated cell tracking tools — ImageJ, CellProfiler
4. Distinctions — Ranked within the Top 250 worldwide as an open-source code contributor in the MATLAB Central code repository: <https://sites.google.com/site/neelsoumya/software>
5. R packages authored: <https://github.com/neelsoumya/dsSurvival>

Attended Workshops and Short Courses

1. Advancing Educational Practice Programme (AEPP), University of Cambridge, Sept 2023 – June 2024 (led to a Fellowship of the Higher Education Academy)
2. AI Safety Policy Fellowship, Cambridge AI Safety Hub, October 2023
3. Summer School on Data Science, Northwestern University, April 2020
4. Workshop on Spatial Statistics, Harvard University, July 2014
5. Santa Fe Institute Complex Systems Summer School, June 2–27, 2008
6. 3rd Annual Summer School in Computational Immunology, Yale University, August 11–16, 2008
7. Gordon Research Conference in Metabolic Basis of Ecology, Maine, July 2008
8. Scaling in Biological and Social Networks Workshop, Santa Fe Institute, July 2007

Consultancy and Requests for Expertise

1. James Templeton Foundation, 2025
2. American University of Dubai, 2026
